## Franciacorta DOCG Brut s.a

---

**Alcohol:** 12,5 % vol.

---

**Component grape varieties and percentages:** 60% Chardonnay - 30% Pinot Blanc - 10% Pinot Noir

---

**Year first produced:** 1979

---

**Average annual production:** 10,000 Demi bottles; 130,000 bottles; 6,000 magnums

---

**Vineyard location and exposure:** In our estate vineyards in the commune of Passirano, at the foot of the Monterotondo and Fantecolo hills, with east-southeast exposure.

**Soil profile:** Level and slightly undulating terrain in loose morainic soils of medium fertility, with medium-deep gravel-pebble mixture.

**Vineyard names:** Larga Cani, Mosnel, Camili, and Tesa.

**Training system:** Spurred cordon.

**Yield per hectare:** 80 quintals of grapes/hectare = 52 hectolitres/hectare.

**Harvest:** Hand picking into small boxes, between the end of August and the first decade of September.

**Vinification:** The clusters are gently pressed in a pneumatic press, and the first and second fractions are kept separate. After a 12-hour gravity settling at 13°C, the must is inoculated with cultured yeasts and the wine ferments, part at controlled temperatures in stainless steel, part (30%) in small oak barrels, and then goes through malolactic fermentation. The cuvée is assembled in March, the liqueur di tirage added and the bottles capped, and the bottles are laid down for the prise de mousse.

**Maturation, ageing:** The tiered-up bottles remain in our 17th-century cellars for 24 months before riddling. The sediment is then removed and they are given the Brut-style liqueur d'expédition, then corked and wired. This Franciacorta then rests in the bottle a further two years before release.
